## Re-registering AFD Postcode

This is caused because your licence for AFD Postcode has expired on your machine and needs to be updated for another year. This can be done as follows:

Using your "Start" button navigate to "Programs" – "AFD Postcode" and "Welcome"

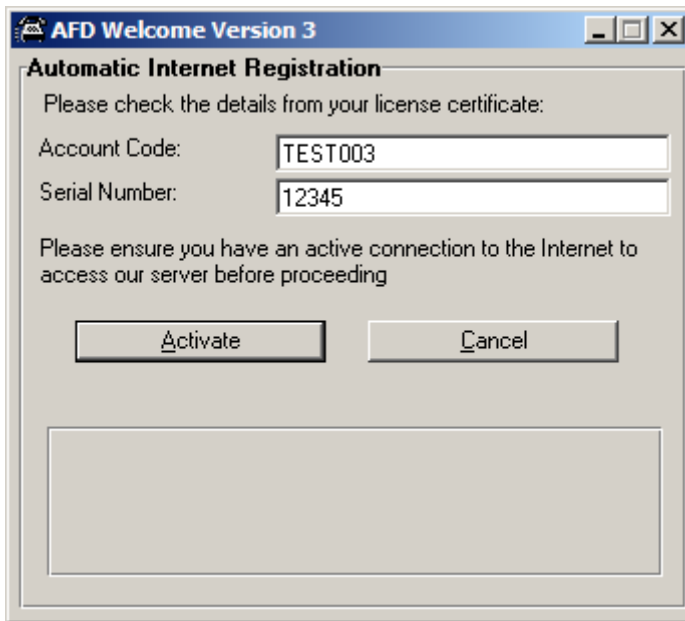

This will load the registration window.

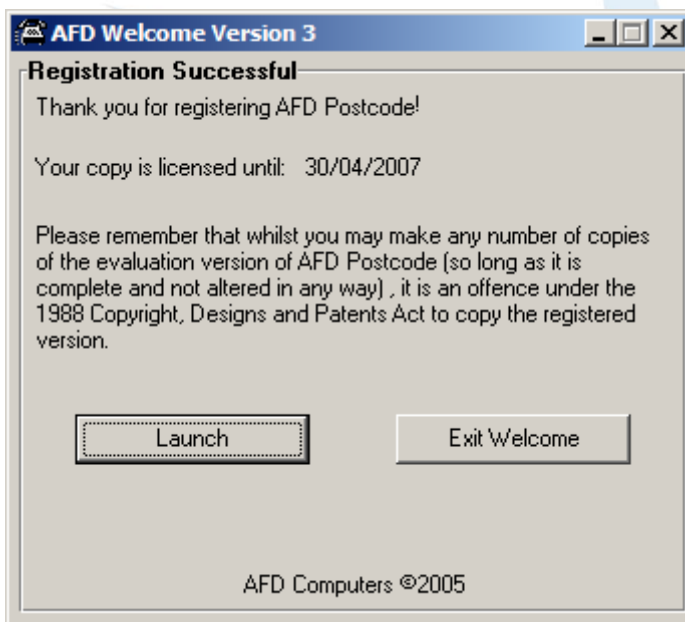

Select "Automatic Internet Registration" and click "Next"

This will take you to the following window, where your existing account details will be displayed, do not change these and click the "Activate" button.

After a short while you will receive the following message if the re-registration has been successful. To exit the registration window, click "Exit Welcome"

You will now be able to use your Postcode lookup as before.
